Assignment Overview

Create a product ordering process using the prompt command to get input from the user and the console.log to send messages back. Use as many of the coding techniques as you can (do not worry about the content). I am looking for evidence that you know how to use the various coding elements we have covered in class. The more the better.

Select a product with lots of steps in its customization (something like a cellphone or condo)
Alternatively you can create a quiz game (building off what we did in class

Requirements

Use variables, arrays and/or to store info
Use if statements to decide if user is done
Store the user responses
Present the final summary of the order back to the user

Optional

Use loops (while loop or for loop)
Use objects
Use functions
Keep track of price or score

Marking Scheme:		
Amount of different techniques used		**/10**
Sophistication of use (ie, a hard coded loop is less then a loop using array.length)		**/10**
TOTAL		**%**

Due: Oct 1st at Midnight
